

**adaptive tools AG** is a Swiss-based consulting and project management company with profound know-how and client base in the international financial services industry.

We advise and support our clients in designing and implementing organisational and technological innovations. With many years of experience we prepare the ground for change by delivering appropriate analyses and concepts. Using our result-oriented project management approach, we guide our clients through the transformation process and ensure high quality and timeliness of all deliverables.

To complement our consulting team, we are currently recruiting an experienced **Senior IT Project Manager** with a technical focus to lead and support various large-scale IT development projects.

#### **Knowledge/Skills:**

- Profound know-how and proven track record in project management – preferably in the areas of technical infrastructure delivery, or with large software-development projects in the financial services industry
- Good knowledge of CMMi project control methodology
- Excellent organisational and people management skills
- Conceptual thinker and good communicator
- Fluent spoken and written English
- Proven ability to manage complex projects desirable
- Good working knowledge of German preferable

#### **Main Tasks:**

- Management of large, complex IT projects
- Overall planning, tracking, controlling, and reporting
- Communication to stakeholders
- Delivery of interfaces with other systems

To be considered for this opportunity you will ideally be educated to a degree level and have at least 8 years of experience in any of the above areas. You will have some prior experience in the financial services industry, are accustomed to working in an international environment and delivering results of the highest quality. Applicants must either hold EU-12 passport or have valid Swiss work permit.

Place of work is Zurich, Switzerland – some additional travel may be required

Permanent position preferred, sub-contracting possible
